PROFESSIONAL SUMMARY

Dynamic Software Engineer and Founder of CampusConnect NG (Startup Project) with expertise in software development and data analysis. Equipped with practical experience from academic projects, including developing a web-based sentiment analysis tool using Python and R, alongside a C# web application. Proven ability to deliver actionable insights to clients
and enhance decision-making processes. Committed to applying strong analytical skills and a collaborative spirit to drive success within software engineering projects.

WORK EXPERIENCE/PROJECTS

Freelance Consultant | January 2025 to Present

GLG Consulting

- Deliver technical insights and tailored solutions to global clients, harnessing expertise in software engineering and data analysis. Collaborated on industry
- research projects, thereby enhancing client decision-making through actionable insights.

Founder & Developer - CampusConnect NG | October 2025 to Present

University of Chester

- Identified challenges faced by Nigerian university students and designed a digital platform to address access to resources, university information and employment opportunities.
- Researched and evaluated technologies and approaches before implementing features.
- Developed and tested web-based functionality, iterating on the design based on feedback.
- Presented the project and communicated technical concepts and business value to academic staff and other audiences.
- Managed the project independently, including requirements, design, development, testing and documentation.

Team member & Software Designer | October 2025 to March 2026

University of Chester

- Worked collaboratively as part of a team to design and develop a prototype nutrition application.
- Contributed to identifying user needs and translating them into practical application features.
- Participated in the design and prototyping process, evaluating ideas and refining the solution based on feedback.
- Gained practical experience working within a structured team environment and managing tasks toward project deadlines.
